

This Detective still has your back.

DSLR owners, we're on your case as well.

ColorEyes 20/20

Put ColorEyes™ Camera on your case and reveal the color behind your digital back or DSLR. A good camera profile can outperform even the fastest Photoshopper when it comes to maintaining accurate colors and consistent results shot after shot. Whether you shoot News, sports, nudes, weddings or product, The ColorEyes camera profiling package will outperform the “canned” profiles included with your camera.

Available as 20/20 (custom target reference file) and Commercial (standard reference file) Both versions include the Integrated Color Digital Gel-Card, perfect for gray balancing your shots or for a warmer/cooler look.

Three Benefits that truly make ColorEyes™ Camera profiling worth the effort:

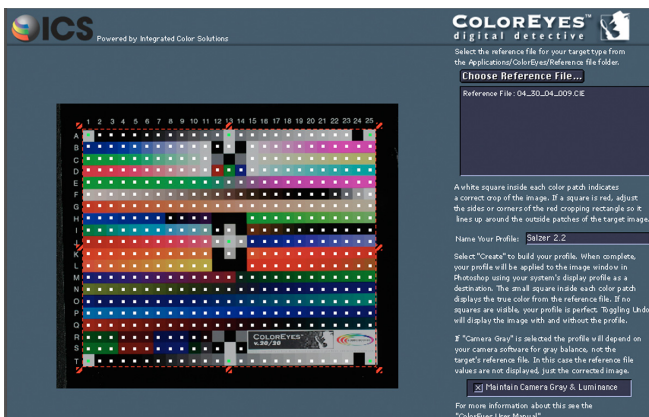

1. We find that most users eliminate 80-90 percent of the color editing time by camera profiling.
2. The process of lighting the target correctly will teach you very quickly how sensitive your camera really is. It may also give you some incite into the colors you have been having trouble with in the past.
3. Camera profiles, and a program like ColorThink™ to map them give you additional tools to analyze problems.
4. Profiling every scene or lighting condition is a myth. One ColorEyes Camera profile will work well in most lighting conditions.

Give your Back or DSLR a boost with a custom ColorEyes Profile.

480 glossy patches measure your camera's ability to reproduce color.

Simple, easy to use PhotoShop® Plugin builds custom icc profiles.
